

5. SoftEther VPN Bridge Manual

SoftEther VPN Bridge is software that allows you to cascade-connect to a Virtual Hub of SoftEther VPN Server operating at a remote location and create a Layer-2 bridge connection between that VPN connection and a physical network adapter on a computer running SoftEther VPN Bridge. SoftEther VPN Bridge is the ideal software for a computer connected to a remote base LAN when you want to connect the remote base LAN to a VPN configured with SoftEther VPN Server (namely, a Virtual Hub on a SoftEther VPN Server).

This chapter describes the functions of SoftEther VPN Bridge and how to use the functions.

SoftEther VPN Client is provided as a free software product. To use all of the functions at no cost, you must agree to the end-user license agreement.
